

The homogenisation Air-Lift aerates water reliably and efficiently.

Benefits :

- Feed the oysters by creating **water movement** with low energy consumption.
- **Homogenise** the water column and buffer the environment.
- **Avoid** excessively high oxygen concentrations.

Homogenisation

Flow rate of
80 m³/h
for 0.2 kW

Different types of base depending on the depth and type of soil.

Homogenisation Air-Lifts

Recirculation Air-Lifts

Increases the productivity of your pond.

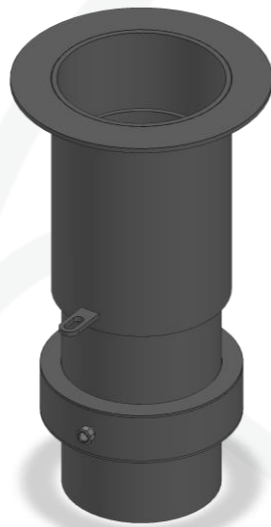

The recirculation Air-Lift system moves water reliably and efficiently.

Benefits :

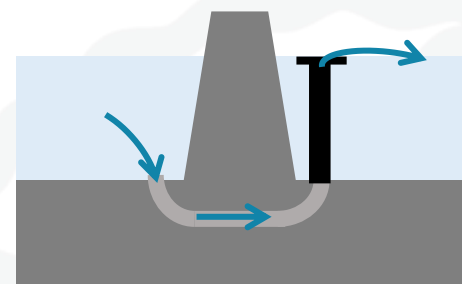

- Create **low-energy water circulation** to recharge the water with phytoplankton.
- Limit dead zones.
- **Different diameters** available for water heights from 80 to 250 cm.

Recirculation

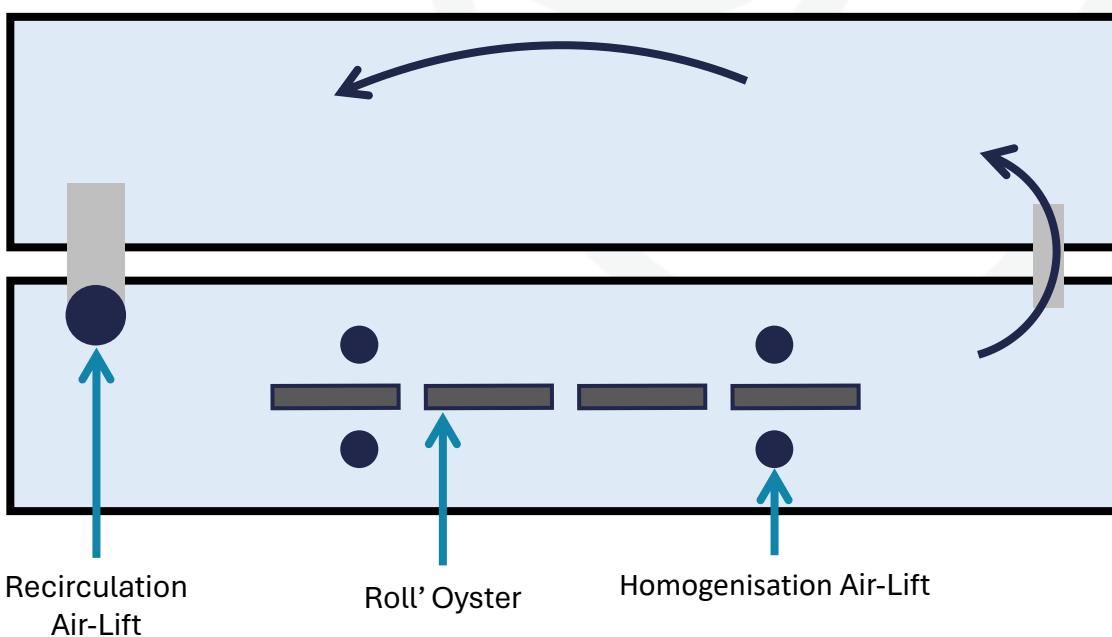

Flow rate of 85 m³/h
for 0.5 kW

This Air-Lift is attached to a pipe between two pond and creates a current.

Example of an Air-Lifts installation
